

Project: Music Hotspot

Group: M Waleed Khan and Hamza Usman

Proposal:

The project given to us is to make an app that will allow user to share music with other devices which are connected using a hotspot both the devices will be synchronized such that one device will broadcast the song to all the devices connected to the hotspot at the same time all the devices will output the same sound being broadcasted by the person who shares the song involving no downloading of the sound by the user who is receiving.
